

Ninja Trader 8 - Beta 3 November 18, 2018

This weekend we finished speed enhancements, all indicators working 100% with one exception, the EVAL at fibs from divergence potential plot is failing .. everything else is working well. Remember to preload data the first time.

Make sure you are on Ninja 8 version 16.3 or later <https://www.screencast.com/t/M2DMo7ad>

DATA IS MOST IMPORTANT!! WATCH THE FOLLOWING VIDEO BEFORE YOU START!

<https://www.screencast.com/t/aGv11Aln5>

Warning : this version is NOT 100% but close, This NT8 version is same as the current version of NT7 so we will be ready for our final push towards the end of this year.

You may run NT7 and NT8 side by side live if you have two data connections (AND A GREAT COMPUTER)

T3 Divergence Potential with "EVAL" warning at Fibonacci areas is still missing, the EVAL at the prior divergence lines will work.

The RGB color scheme for the "T3 Synthetic Triggers" has a bug and you must use Ninja supplied colors for your background. Transparent or Gray may also be used.
